SuperAdmin

General View

When the screen opens, there is the '**New User**' button and the '**Hide Disabled User**' option box at the top left, respectively.

In the upper right, there is the '**Save User**' button.

The locations of these buttons are fixed.

In the first case, only the *User Table* is visible in the white area at the bottom. If there is no data, the table appears empty.

User Table consists of an ID, Username, Display Name, Phone, Email, User Roles, and Enabled columns.

The user ID is automatically assigned.

Hide Disabled User

When the '**Hide Disabled User**' check box is checked, disabled users in the table, ie enable = false, are hidden and not displayed. When unchecked, disabled users are also displayed in the table.

New User Button

When the '**New User**' button is clicked, the white area at the bottom will be divided into two equal parts. The table will continue to be displayed on the left side.

On the right side, the New User creation window will open.

New User Window

Username

The name that the user will use to log in to the system is entered into the '**Username**' textbox.

Display Name

The name that other users will see is entered into the '**Display Name**' textbox.

Phone

The phone number of the user is entered in the '**Phone**' box. If an entered phone number does not match the phone format, it will give an error.

Email

The email of the user is entered in the '**Email**' box. If an entered email does not match the email format, it will give an error.

error:

- The textbox frame turns red.
- An error message appears under the relevant textbox.
 - The error message for the phone number is "The expected format is 555 555 55 55".
 - The error message for the email address is "The expected format is example@piworks.net ".

User Roles

"**Select user roles...**" must be added as the default text or placeholder in the 'User Roles' drop-down selection box, to prompt the user to make a selection of user roles before saving New User.

When the '**User Roles**' box is clicked, three options are displayed. These are Guest, Admin, and SuperAdmin.

Enabled

When the '**Enabled**' checkbox is checked, the user account is activated, i.e. enable = true. If not checked, the user account is deactivated, i.e. enable = false.

Save User Button

The '**Save User**' button is initially inactive

Once all the information for the New User is filled out, the '**Save User**' button will become active.

Clicking this button will save the new user's information in the relevant table. Following this action, the updated version of the table will be displayed in the left-hand window. The right-hand window will then be cleared, allowing for the input of new user information.

If the window is closed without clicking the Save User button, the New User's information will not be saved to the relevant table.

Version Table:
